

LA BUVETTE®

The Specialist in Watering

ONE-PIECE TROUGHS FOR SMALL ANIMALS

Available in 3 lengths to suit calves and sheep...

They offer two possibilities of use:

- distribution of solid feed,
- distribution of milk to calves in buckets that fit in the specially provided shapes.

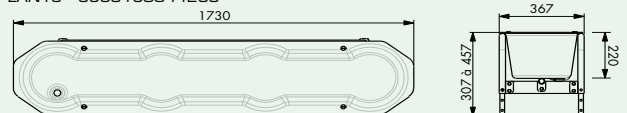

These sturdy troughs are easy to install, move around and clean, which makes them ideal for feeding small animals both indoor and outdoor.

- ▶ Sturdiness guaranteed by strong, one-piece trough made of food-safe high-density polyethylene treated against UV rays.
- ▶ Quick and easy installation.
- ▶ Easy maintenance:
 - suitable for high-pressure cleaning
 - resistant to acid
 - drain plug removable without tools (30 mm diameter) and rounded internal shapes.
- ▶ Frame designed to last:
 - made of hot dip galvanised steel
 - solid tubes, 27 mm in diameter and central reinforcement under the trough
 - 4 feet with adjustable height every 5 cm (from 31 to 46 cm)
 - 4 or 6 linking points (depending on type) but without fixed connection to avoid breaking due to differences in expansion between the polyethylene trough and the steel frame.
- ▶ The entire assembly is easy to handle and carry.
